

A green leaf with water droplets on a dark background with faint code.

The Planetary Health Unified API

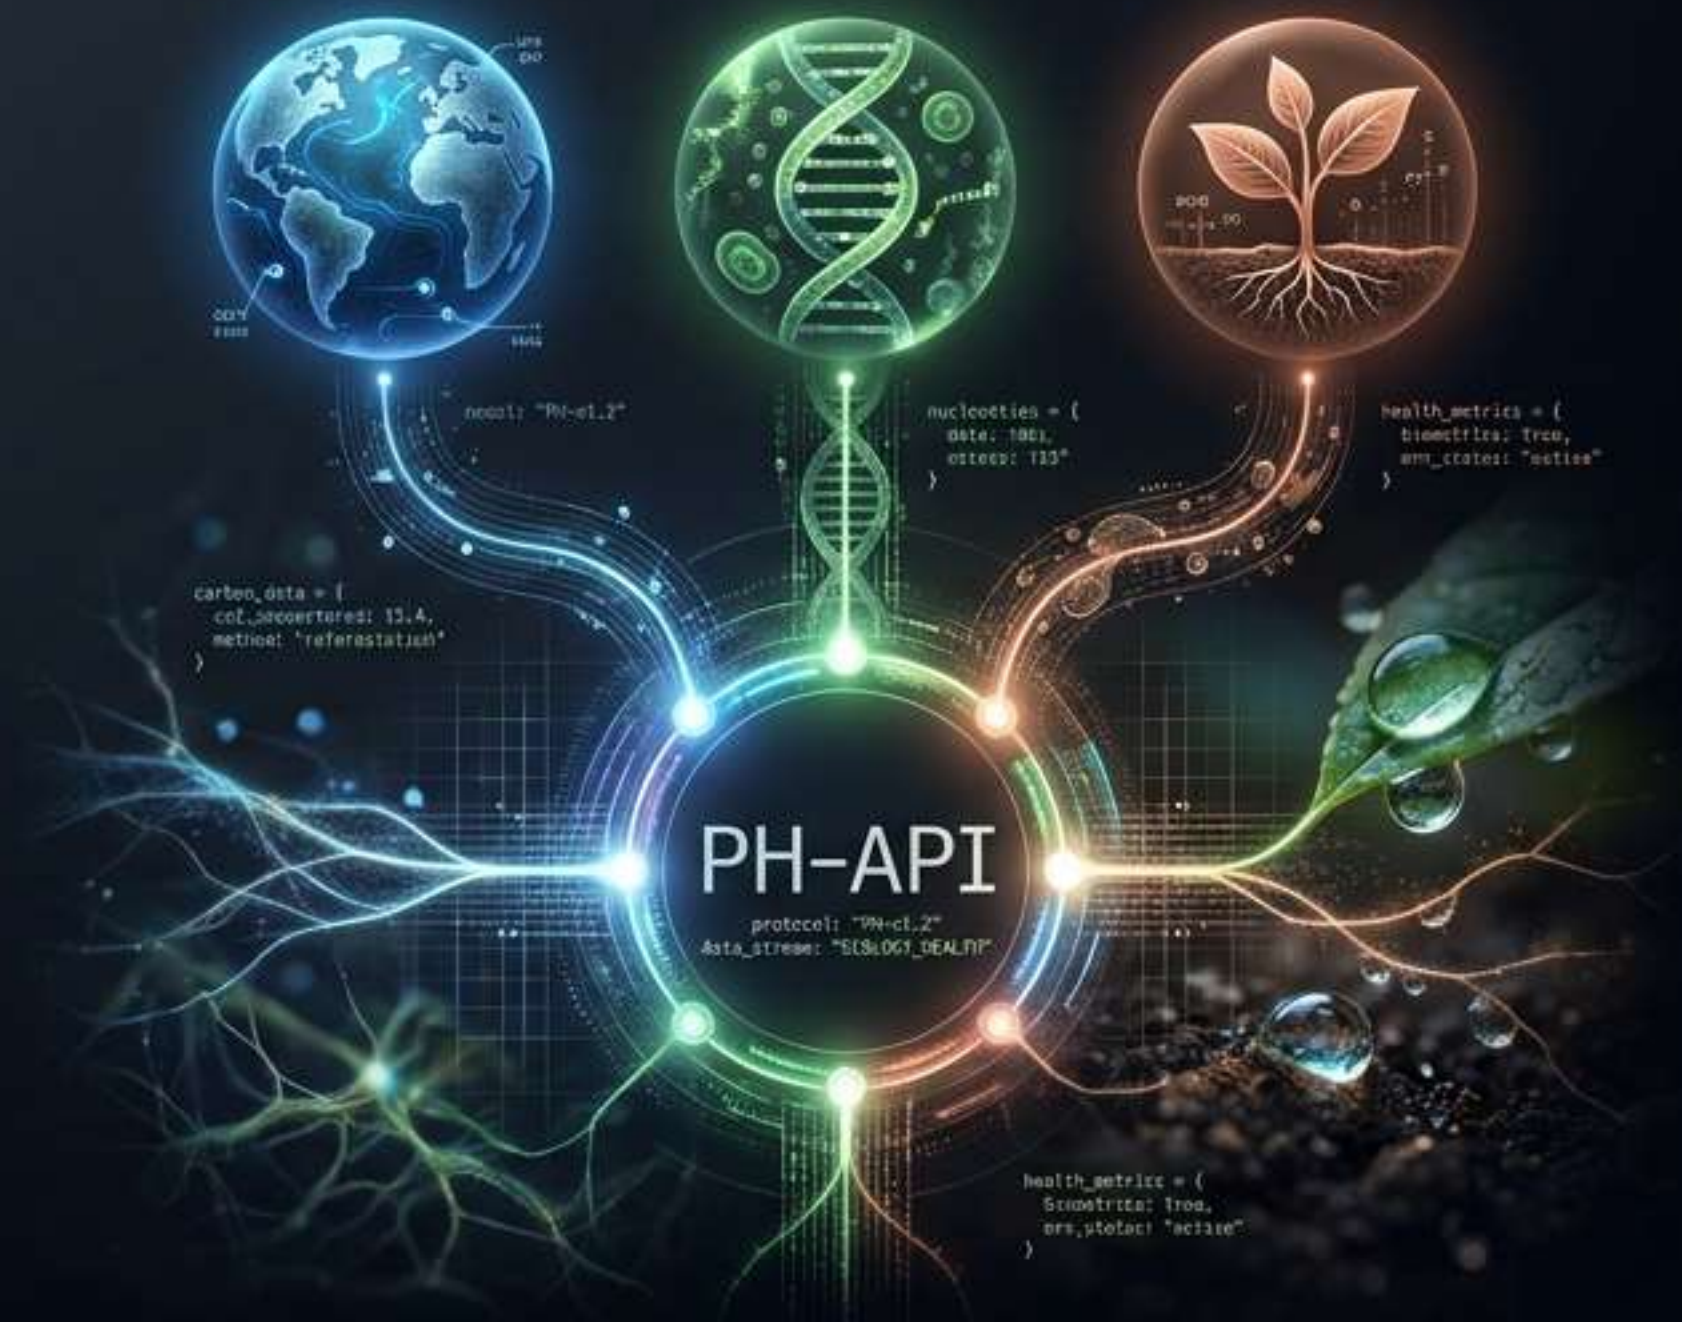

PBPE Marketplace

Building the Operating System for Earth and Wellness.

Money flows through APIs. Now, planetary value will too.

Stripe abstracted the infinite complexity of global finance. It hid the messy plumbing of banks behind elegant code.

PH-API abstracts the infinite complexity of ecology, agriculture, and human biology. It hides the messy plumbing of carbon tracking, MRV, and health data behind a single standard.

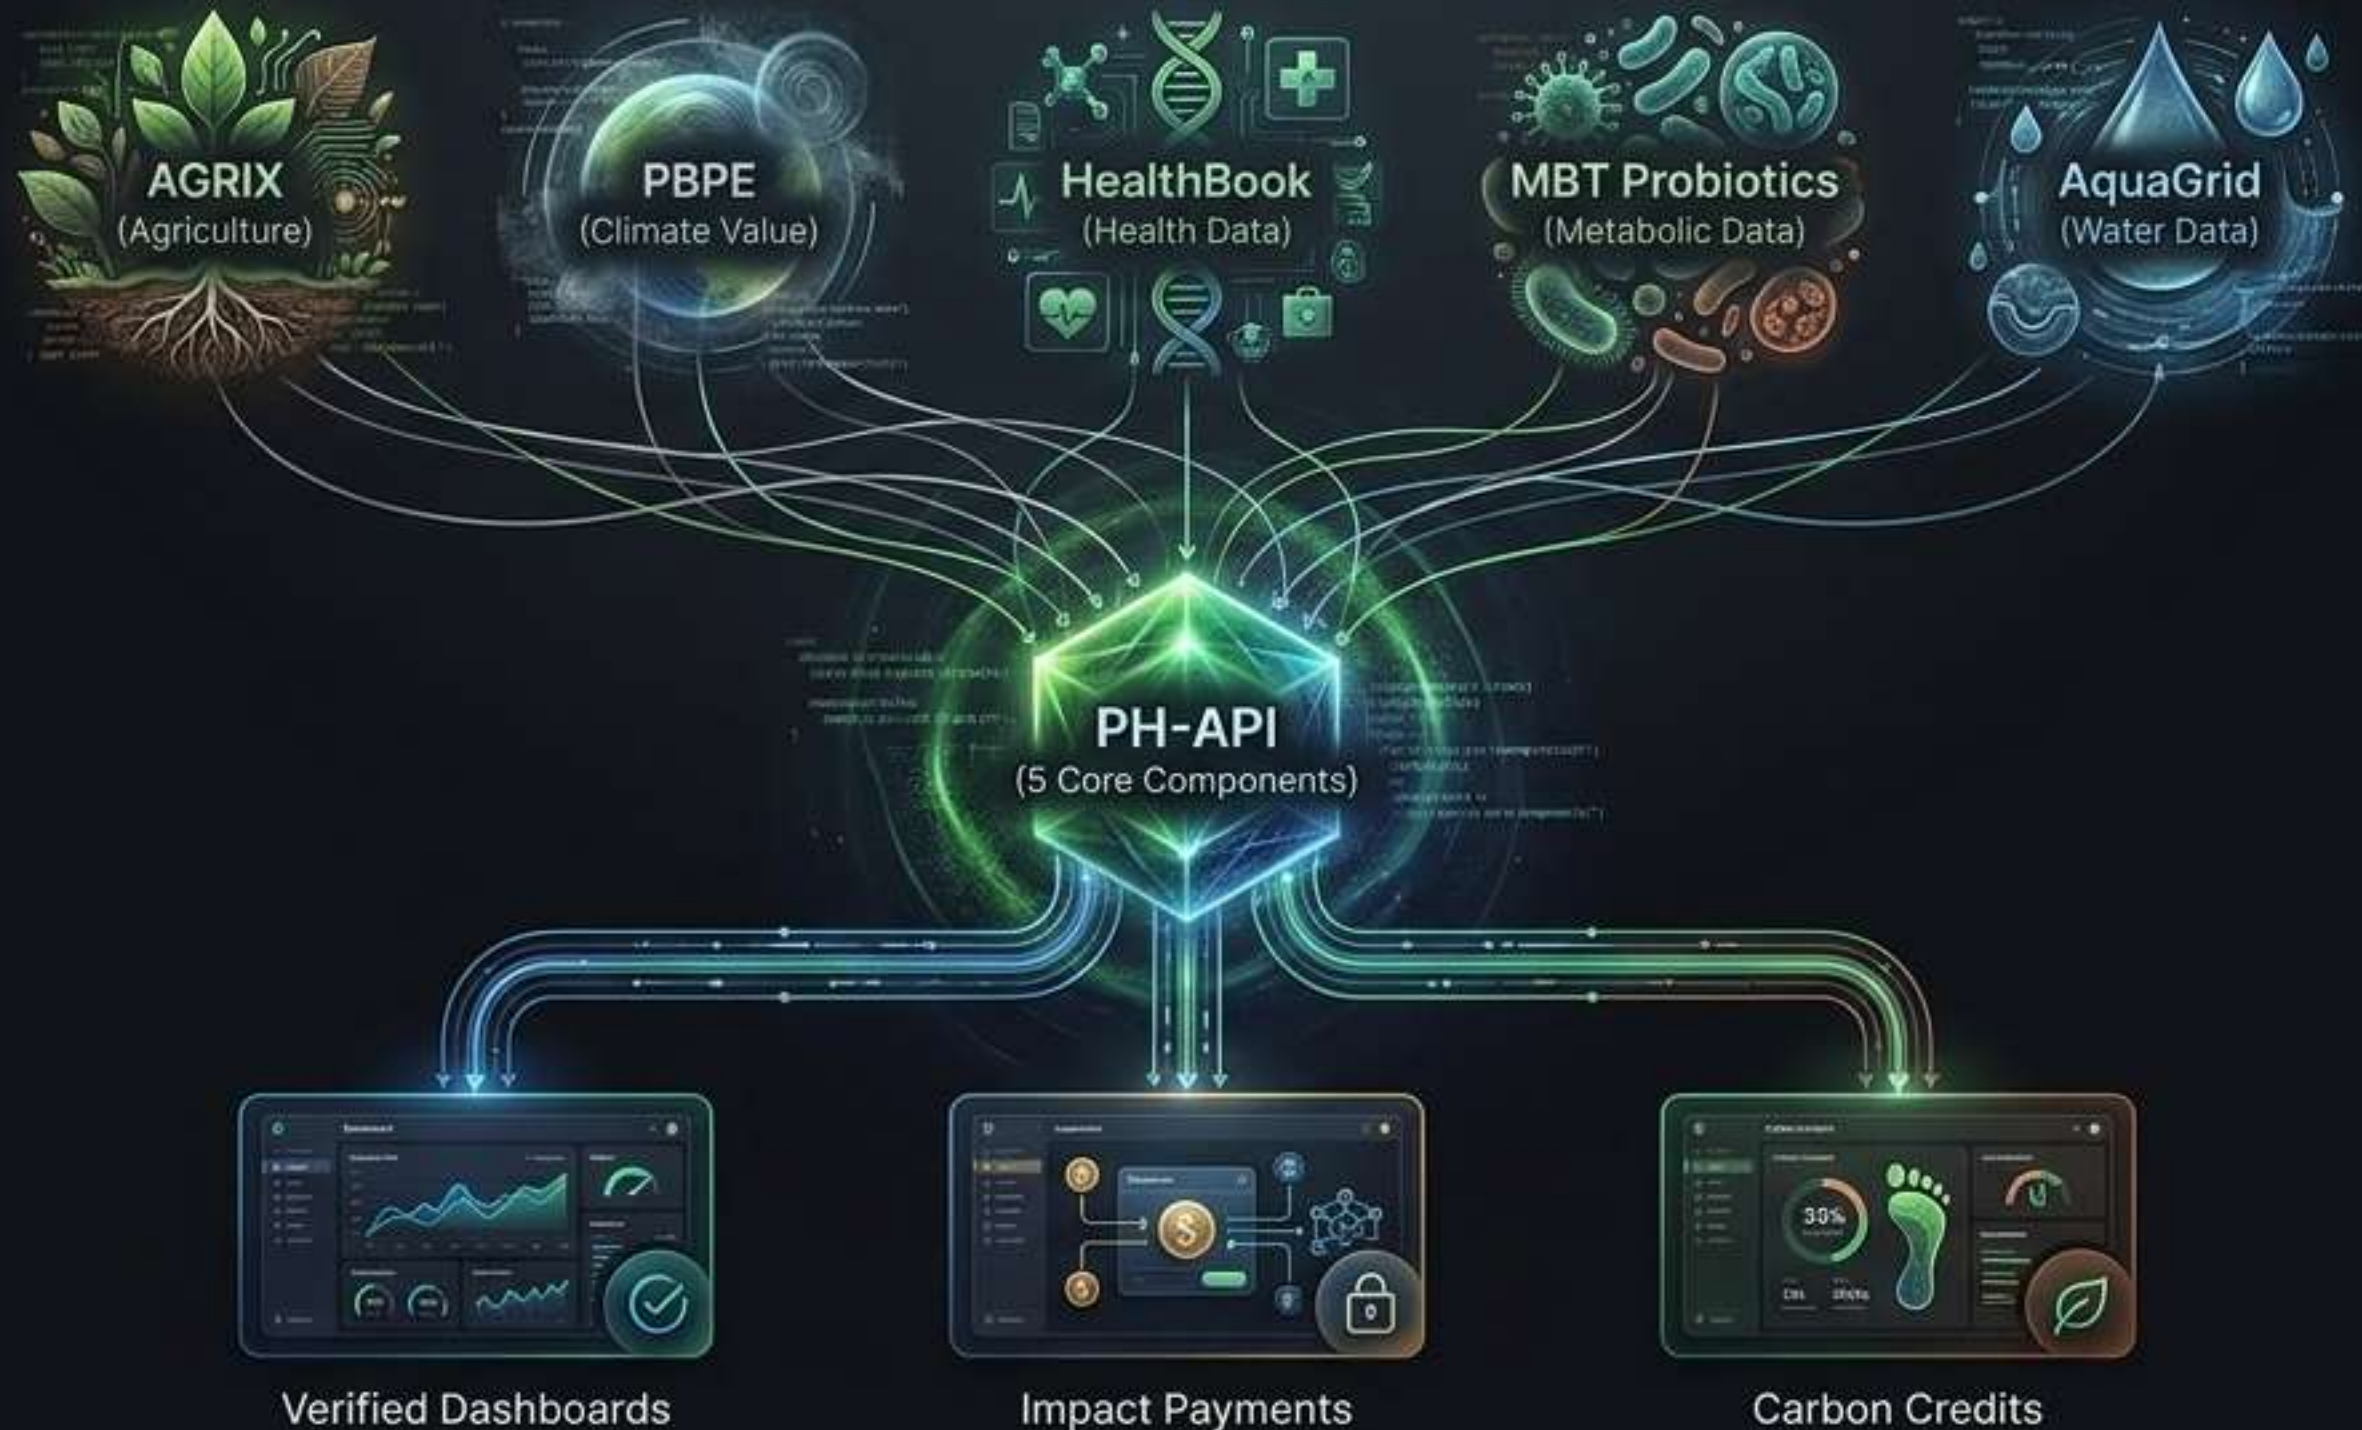

Seven lines of code to change the world.

```
impact = PHAPI.ImpactIntent.create(  
    co2_reduction=12.5,  
    soil_regeneration=3.2,  
    health_score=18,  
    user="user_123"  
)
```

Integrating climate, health, and agriculture data into a single, unified standard. The developer never needs to know how to calculate soil regeneration or medical cost reductions—the API does it all.

Taming the complexity of ecological and biological data.

5 unified API components designed to instantly process, verify, and distribute impact value across any platform

Defining and sourcing global impact without custom integrations.

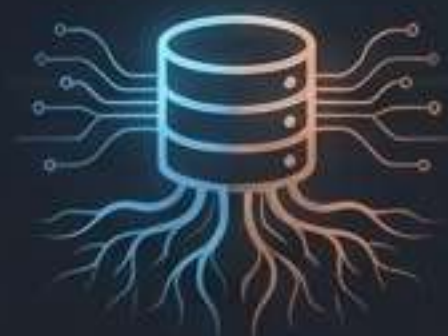

ImpactIntent

The Goal

The unified object for Earth and Health impact. Developers create the intent, and all backend calculation is automated.

Examples:

- CO2 reduced (kg)
- Soil regenerated (m2)
- Microbiome improved (MBT55 score)
- Medical cost reduction potential (Yen)

ImpactSource

The Origin

Abstracting the data origin so developers never have to write custom integrations for different hardware or platforms.

Inputs:

- AGRIX
- PBPE
- HealthBook
- MBT Probiotics
- AquaGrid

Auto-generating the UI for verified impact transparency.

1-Click Visualization

Instantly turns invisible backend data into beautiful user interfaces.

Instant Verification

Cryptographically secure proof of impact.

Shareable Receipts

Portable impact records for users and brands.

Verified Impact Receipt

12.5 kg
CO2 Saved

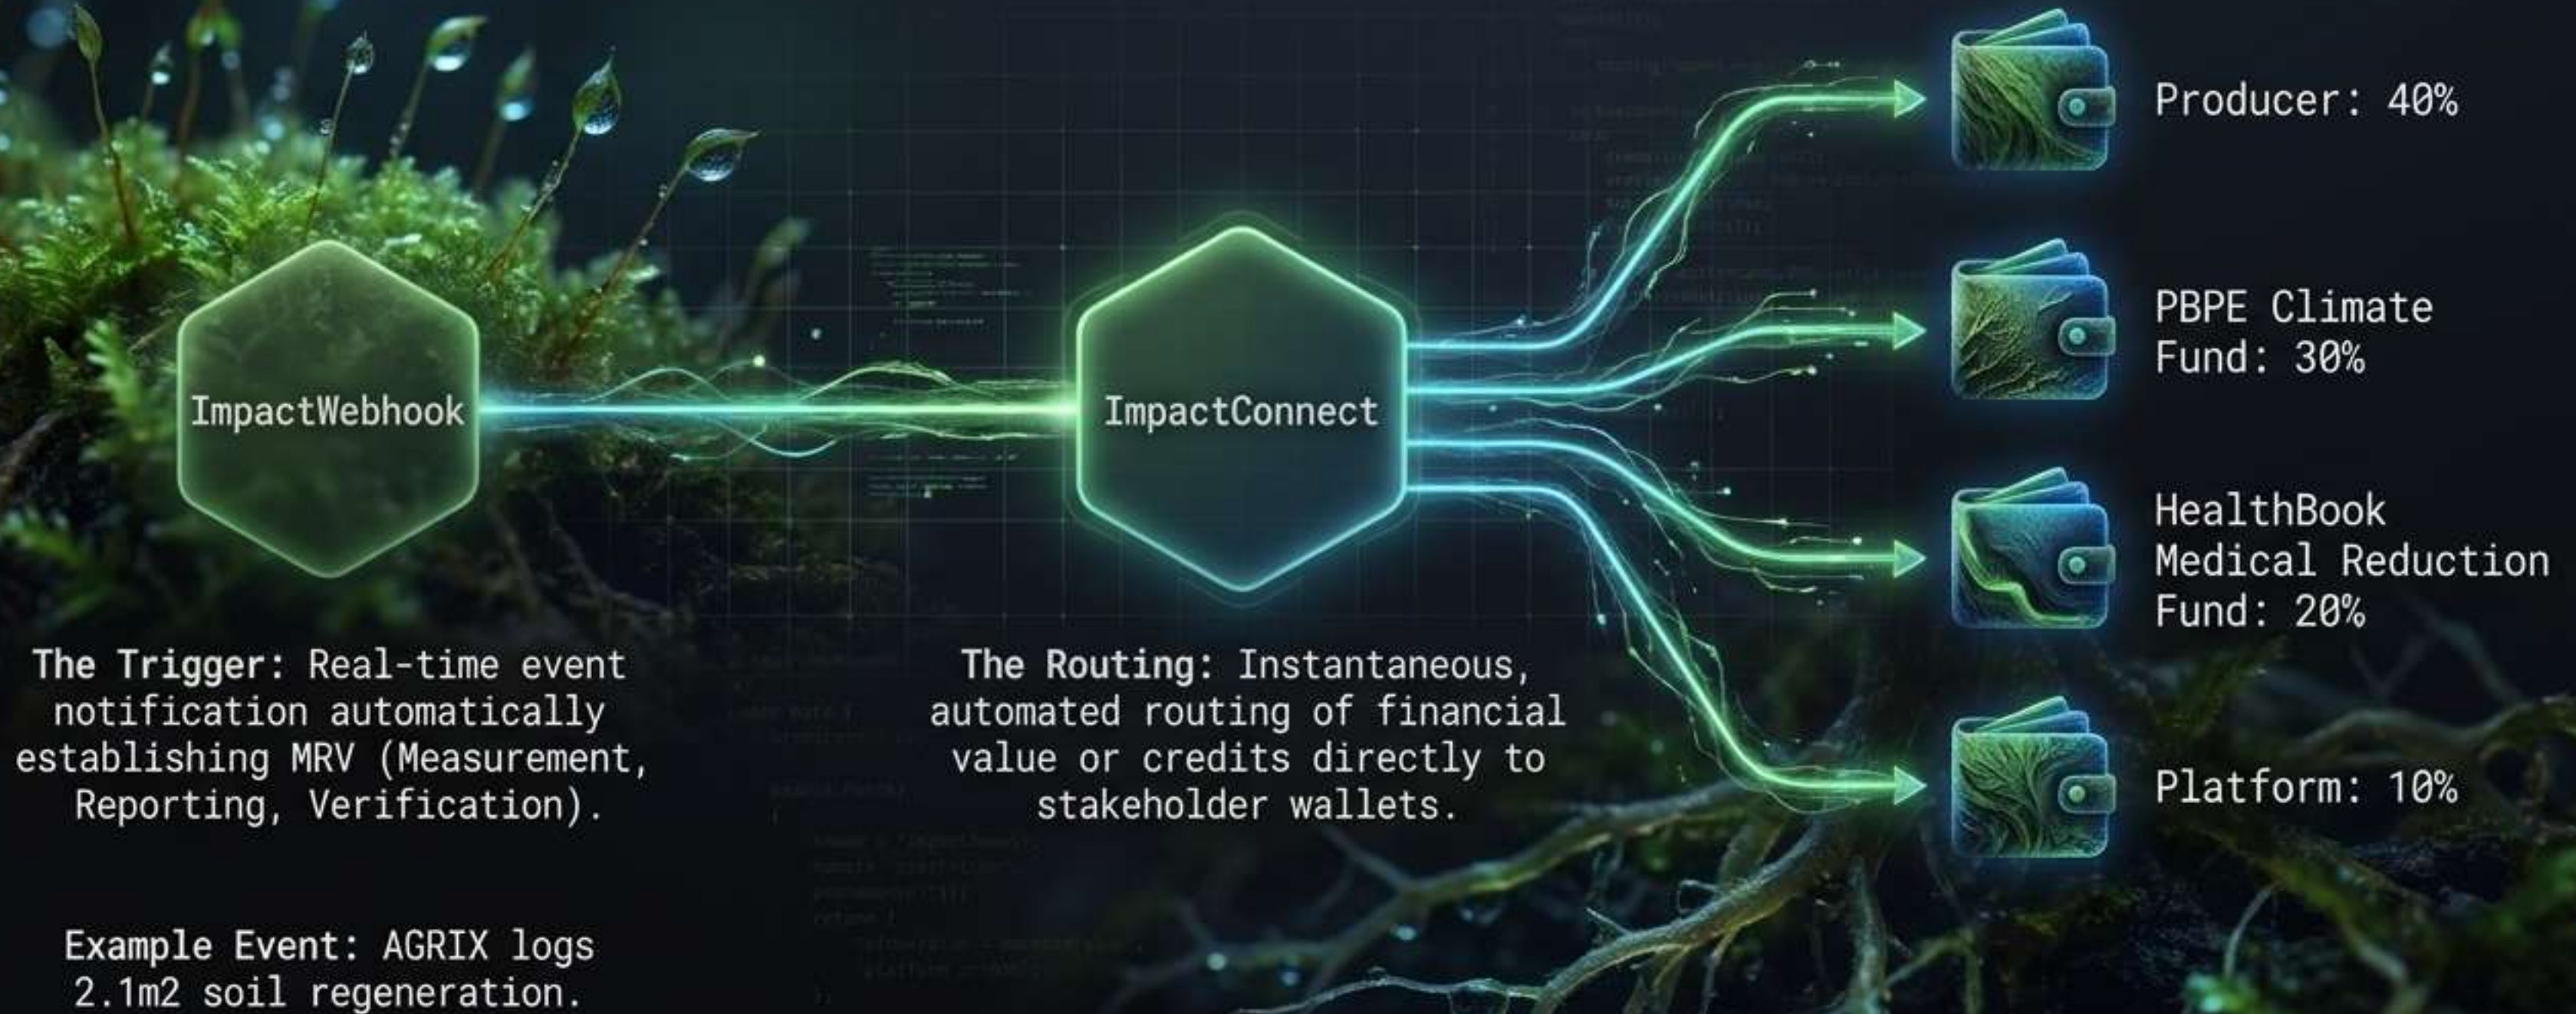

3.2m2
Soil Restored

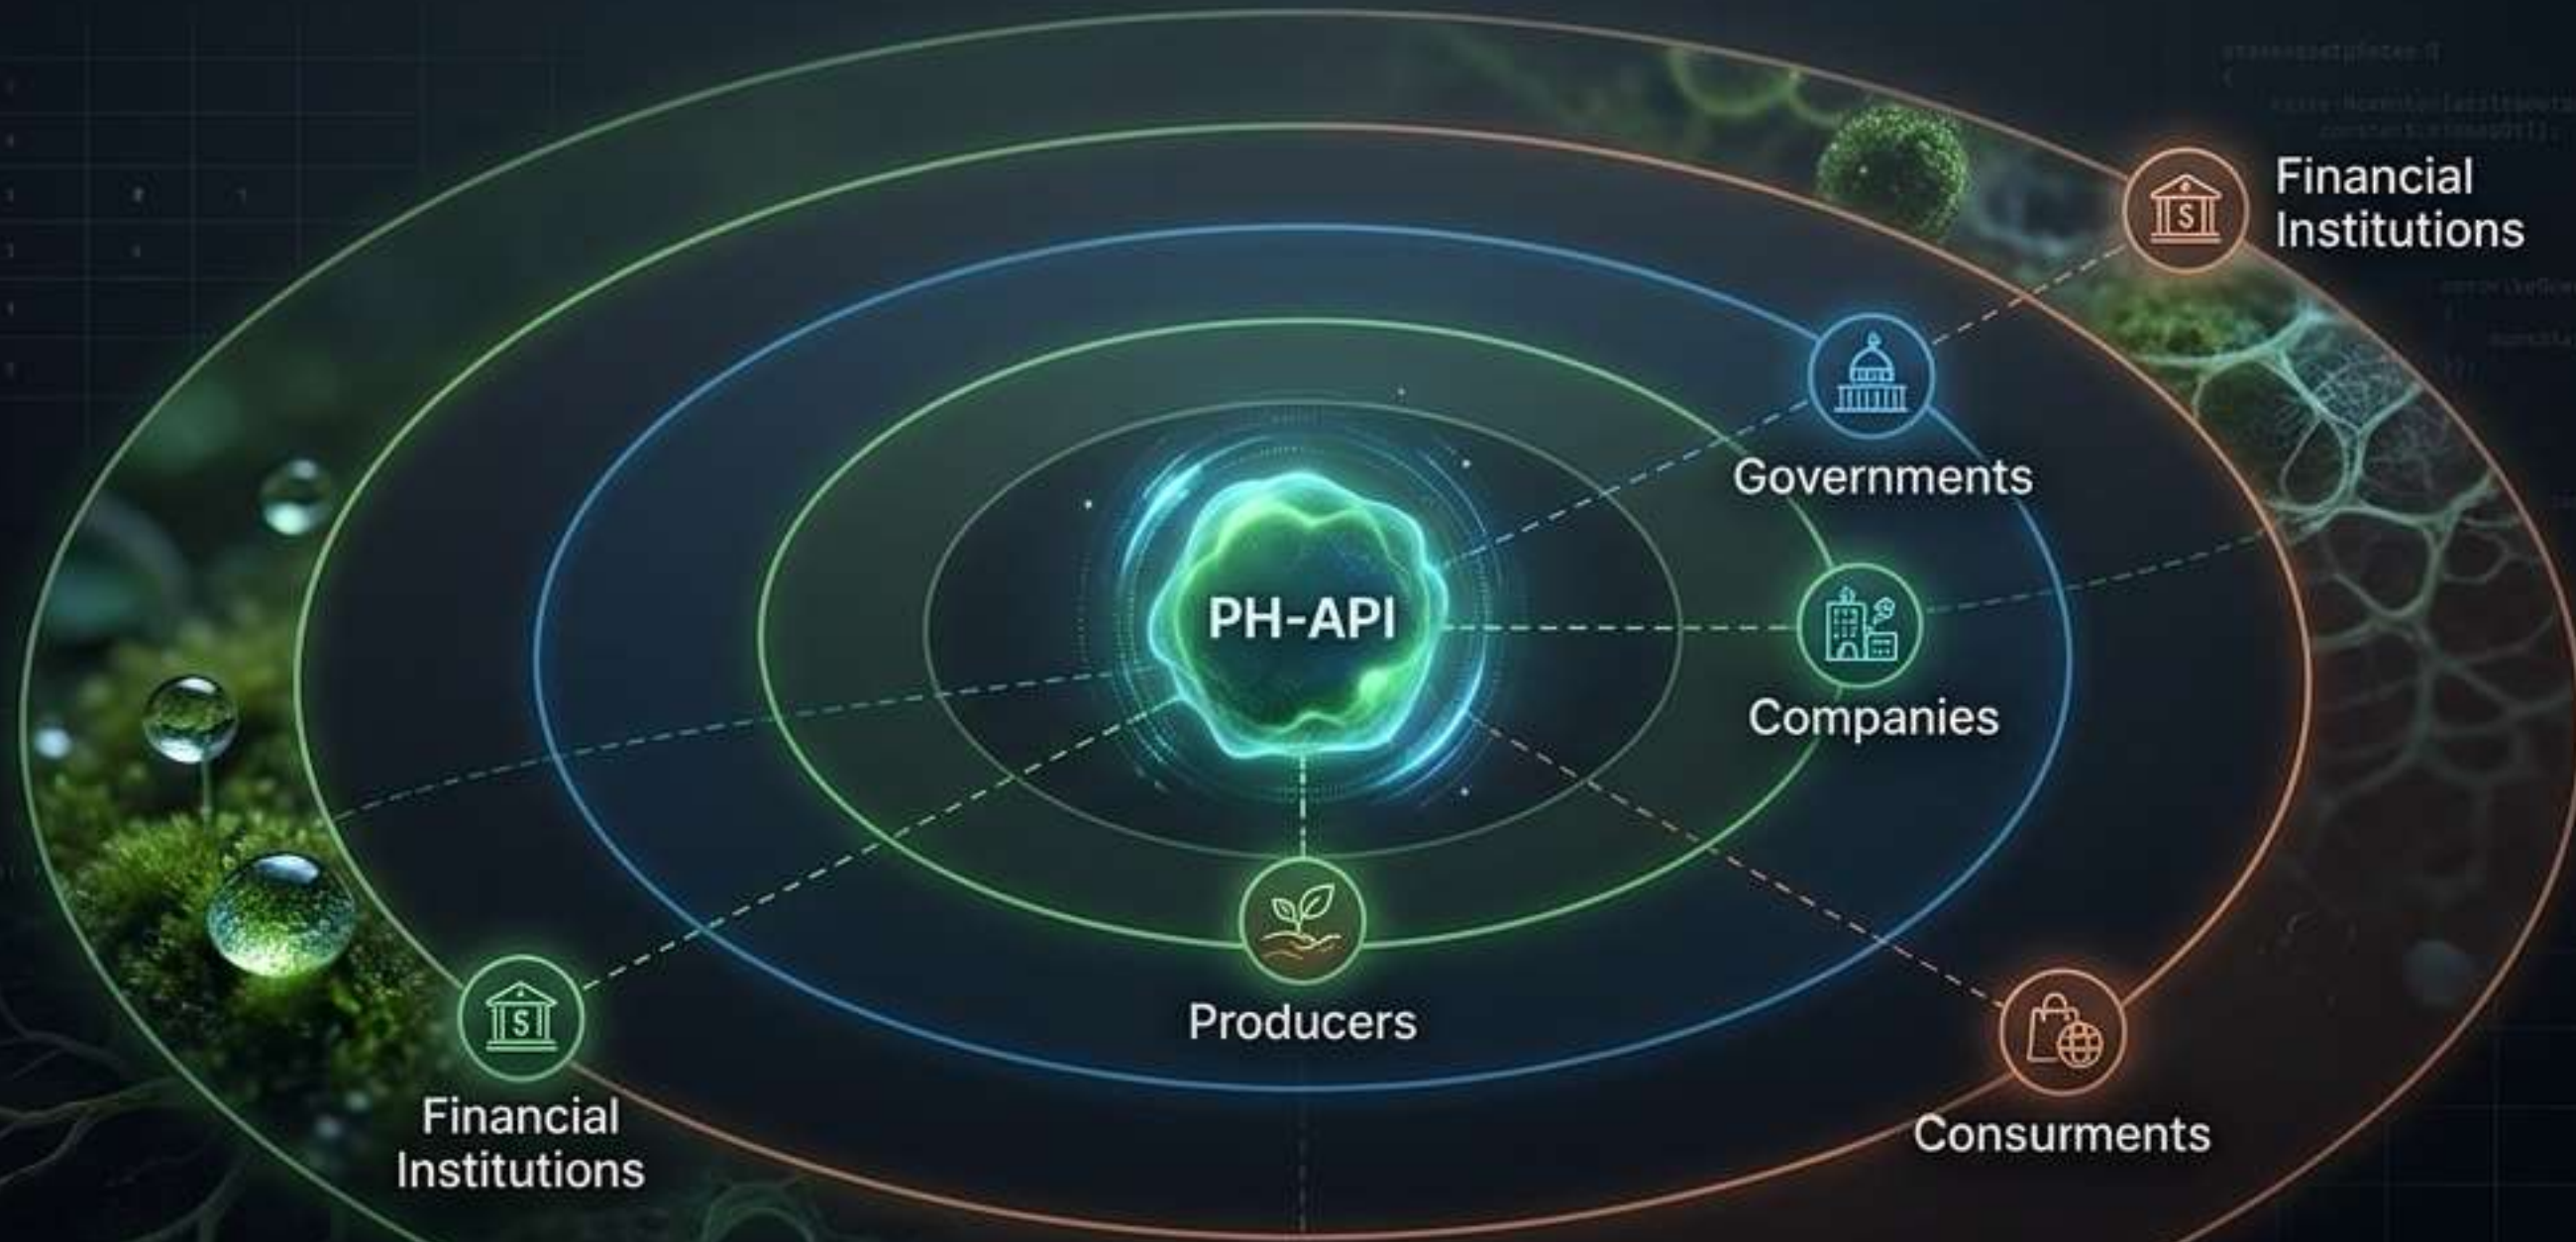

MBT55 Score
+18

Share / Verify Impact

Automating verification and real-time value distribution.

Instantaneous ecosystem benefits trigger upon impact.

Core Principle: The moment an impact occurs, every single stakeholder receives instantaneous value. From local farmers to global financial institutions, the cascade is automatic.

The genesis of value for producers and consumers.

Producers

Farmers / PBPE

Farmer inputs data
into AGRIX/PBPE

API instantly calculates
environmental impact

Instant MRV and automated
financial compensation

Consumers

HealthBook Users

User logs data in HealthBook
or consumes MBT Probiotics

API calculates MBT55 score

Medical cost reduction value is unlocked
and user is rewarded with PBPE/points

Scaling verified impact at the institutional level.

Companies (Retail, Food, Insurance)

Real-time, automated generation of ESG and CO2 reduction reports.

```
API > ESG_REPORT.GENERATE()
```

Frictionless, automated acquisition of PBPE carbon credits.

```
API > PBPE_CREDITS.ACQUIRE()
```

Dynamic health insurance pricing algorithms fed directly by verified user health data.

```
API > HEALTH_DATA.INTEGRATE()
```

Governments & Municipalities

Real-time, macro-dashboards tracking regional health, agricultural regeneration, and climate metrics.

```
API > DASHBOARD.MACRO_VIEW()
```

Automated, data-driven routing of public subsidies and grants directly to verified impact generators.

```
API > SUBSIDY_ROUTING.AUTOMATE()
```

Creating a radically new planetary asset class.

Evolving from simple payment data to highly accurate Planetary Financial Forecasting.

Impact Finance:

The creation of entirely new financial products backed by cryptographically verified ecological and biological data.

Real-Time Valuation:

Continuous, dynamic pricing of carbon credits and preventative health-improvement assets.

Automated Portfolio Monitoring:

Instantaneous, verified ESG data flowing directly into institutional investment trackers.

The complete value distribution matrix

STAKEHOLDER	THE TRIGGER EVENT	THE INSTANT BENEFIT
Producers (Farmers)	Data entry via AGRIX / PBPE	Instant MRV & Auto-compensation
Consumers	Health/Microbiome improvement	Real-time visibility & point/value rewards
Enterprises	Network impact generation	Automated ESG / CO2 accounting & reporting
Governments	Regional data accumulation	Real-time policy adjustments & automated subsidy routing
Financial Inst.	ImpactIntent creation	Real-time asset valuation & ESG monitoring

The Stripe-ification of global carbon credits.

Historically, carbon measurement, reporting, and verification took months and cost millions. The API reduces this to milliseconds.

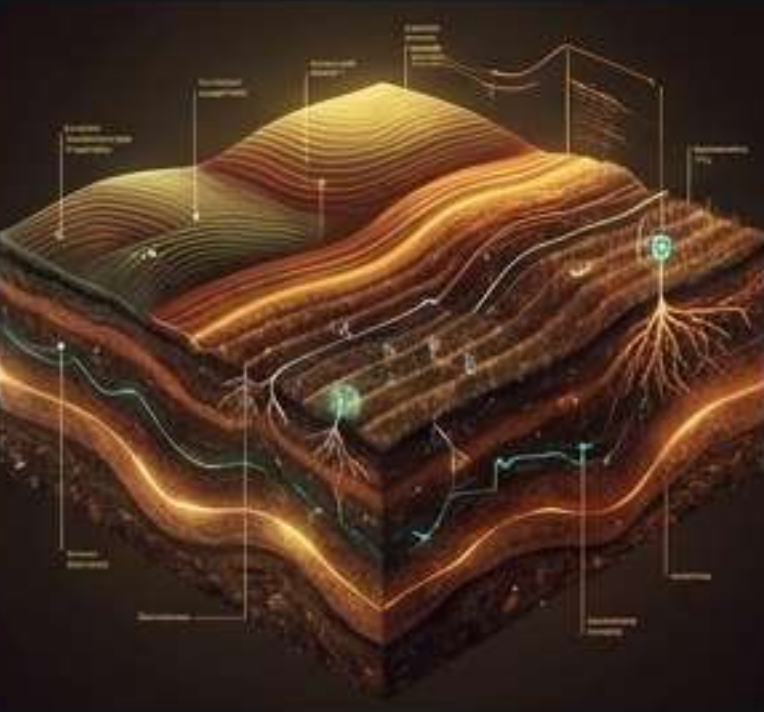

Transforming preventative health and agriculture into liquid assets

HealthBook & MBT Probiotics

ImpactIntent logs gut-health scores.
ImpactConnect translates that health improvement into a tradable medical-cost-reduction value.

Preventative health becomes liquid value.

AGRIX & PBPE

ImpactIntent calculates soil nutrition.
ImpactWebhook automates the MRV instantly.

Everyday farming data becomes a verified financial asset.

The operating system for Earth and wellness.

Stripe API =
Abstracting the Flow
of Money.

PH-API = Abstracting
the Flow of Earth, Health,
and Climate Value.

Redefining the foundational infrastructure of global
finance, health, and ecology for the next century.
